

CompTIA Security+

The Security+ certification from CompTIA is a credential that many organizations are requiring of all of their IT team members. Security+ addresses and validates knowledge of general security concepts, operational security, communication security, infrastructure security, and cryptography. Smart businesses insist on Security+ training. This certification is recognized around the world as the benchmark for foundation level security professionals. Incorporating a comprehensive range of security knowledge areas, Security+ was developed with input from industry, government, academia, and front-line practitioners, so you can be assured of its relevance.

Who Should Attend:

This course is intended for the Information Technology (IT) professional who has networking and administrative skills in Windows-based TCP/IP networks and familiarity with other operating systems, such as NetWare, Macintosh, UNIX and Linux. The course covers industry-wide topics, including communication security, infrastructure security, cryptography, access control, authentication, external attack and operational and organization security. Candidates may now apply the CompTIA Security+ certification towards the Microsoft MCSA and MCSE Security designations.

Course Content:

Students build on their knowledge and professional experience with hardware, operating systems, and networks to acquire the skills that will be required to implement basic security services on any type of computer network.

- General Security Concepts
- Communication Security
- Infrastructure Security
- Basics of Cryptography
- Operational/Organizational Security

Course Length: 3 days.
